

How to read the output files

Jalour investor packs for Green Square and L'avenir. All figures are in EGP million unless stated. All returns are projections, not guarantees.

1. What is in the output folder

Table 1: Output folder

Folder or file	What it is	Who may see it
COMBINED_125M	The pack for an investor paying EGP 125M: EGP 62.5M in each project. Shows both projects.	That investor, after signing the NDA
GS_050M, GS_075M, GS_100M	Green Square packs for tickets of 50, 75 and 100M. Name only Green Square.	That project's investor only
LA_050M, LA_075M, LA_100M	L'avenir packs for tickets of 50, 75 and 100M. Name only L'avenir.	That project's investor only
00_Model_Reconciliation, 01_Structuring_*, 02_Open_Items_Register	Internal working papers: how the source model was checked, the structure analysis, and the list of open items.	Jalour only
INTERNAL_Disclosure_QA.docx	What the team may and may not say to investors about other investors and projects.	Jalour only
QA_Reports	Test results for every pack (numbers tie out, independent recalculation, disclosure scan).	Jalour only

2. The files inside each pack

Table 2: Files in a pack

File	Formats	Read it for
Deck	.pptx and .pdf	The 17 to 18 slide presentation: terms, market, project, cash flow, returns, risks, next steps. Start here.
Investment_Memo	.docx and .pdf	The full 28 to 35 page memorandum. Section 1 is the summary; sections 12 to 14 give the terms, returns and security; section 17 the risks.
DD_Memo	.docx and .pdf	The due diligence memorandum: what documents exist, what is pending, red flags, open items.
Financial_Annex	.xlsx	The workbook behind every number in the deck and memos. Open this to check or change a figure.
NDA_Template	.docx and .pdf	The non-disclosure agreement to sign before sponsor, permit, title and landlord materials are shared. For counsel review.

3. How to read the Financial Annex (Excel)

Colour code: blue text is an input you can change; black text is a formula. Change an input on the Inputs sheet or the blue scenario parameters and every sheet recalculates. Do not type over black cells.

Table 3: Annex sheets

Sheet	What it shows
Cover	Title, confidentiality statement, status and sheet list.
Summary (single packs) or Combined_Summary (combined pack)	The headline figures used in the deck and memos: ticket, net cash flow, NPV, peak shortage, Option A and Option B returns. The reference sheet.
Inputs	Every assumption with its source or basis.
Source_Data	Quarterly sales, collections and costs taken from the Jalour model.
Project_CF	Quarterly project cash flow: collections less landlord payments, construction, commission and SG&A. Net cash flow, cumulative position and NPV at 14%.
Sources_Uses	What the money is used for at the funding peak and where it comes from. The balance is shown as Jalour sponsor equity, project collections and other capital sources.
Option_A	Units option: face value (2.0x), resale at delivery list, investor cash flows, IRR and multiple, and the cost to Jalour.
Option_B	Cash option: 2.3x in 12 quarterly instalments after a 24-month grace period, coverage tests and pooled cash.
Scenarios	Downside, upside, cost overrun, collections slip and delivery payments at handover.
Sensitivity	Price, delay, cost and slip sensitivities.
Reconciliation	Checks against the source model and an independent recomputation. Every difference should be zero.
Combined pack only	Project sheets carry the prefix GS_ or LA_. Combined_Position adds the two projects together; Combined_Reconciliation checks both.

4. Key terms

Table 4: Terms

Term	Meaning
Option A (units)	The investor receives units with a face value of 2.0x the ticket, priced at the launch list, and resells them after handover.
Option B (cash)	The investor receives 2.3x the ticket in 12 equal quarterly instalments after a 24-month grace period.
IRR	Annual internal rate of return of the investor's cash flows. MOIC is cash received divided by cash invested.
NPV	Value today of Jalour's net cash flow, discounted at 14% a year.
Peak shortage	The lowest cumulative net cash flow before any investor money. It is the project's maximum funding need.
Pooled cash	Project cash plus the ticket less payouts. Nothing is ring-fenced.

Term	Meaning
Coverage	Cash available to pay an instalment divided by the instalment. Two versions: net cash flow only (strict) and pooled cash.
Base, downside, upside	Downside: sales 12 months later and prices 10% lower. Upside: prices 10% higher. Handover case: delivery payments arrive at handover, not before.
Month numbers	In every single-project pack, month 1 is that project's own sales launch; month 0 and negative months are before launch. The landlord down payment, and so the investor's funding, falls at month -3 (Green Square) and month 0 (L'avenir). In the combined pack each project uses its own months, except the combined cash position, which uses one common calendar: Green Square launch = month 1 and L'avenir launch = month 7.
[After NDA]	Information provided only once the investor has signed the NDA.

5. How to check a number

1. Find the figure in the deck or memo and note its label and case (base, downside, upside).
2. Open Financial_Annex.xlsx and go to Summary (or Combined_Summary). The same figure is there, and the cell links back to the calculation sheet.
3. Click the cell to see its formula and follow it to Project_CF, Option_A or Option_B.
4. Open the matching QA report in QA_Reports to see the tie-out and the independent recalculation.

6. Rules for sharing

- Everything in every pack is confidential and subject to the NDA. Send the NDA first.
- Send each investor only their own pack. The six single-project packs must never be sent with, or mention, the other project.
- Keep the files in this guide, QA_Reports, the 00, 01 and 02 working papers and INTERNAL_Disclosure_QA.docx inside Jalour.
- Send the PDF versions to investors who only need to read; send the Excel annex to those who want to test the numbers.
